MEMORANDUM FOR: Chief, Engineering Support Group, FBIS

FROM:

Chief, Operations Group, FBIS

STAT

SUBJECT: INTERNET Decoders

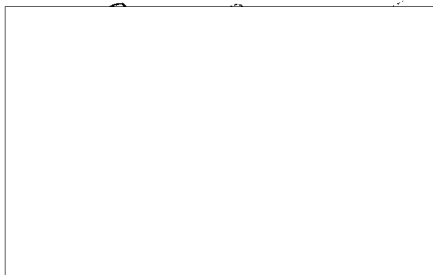

1. We have been informed by C/FSB/FED that two decoders will be arriving either 20 or 23 March from Scientific Atlanta for use with INTERNET. It is very important that one of those decoders be installed at the TVRO so that we can continue INTERNET feeds to the OIR TV grid after the planned encoder is installed at Madley (projected for 25 March).

2. We realize that this will leave Independent Hill with only one decoder, and thus no backup, but we feel it is more important to continue our service to our consumers, which will require that the TVRO have a decoder.

3. C/ICCS has discussed this with C/FSB, as well as with Jim Bonner of HED, who is working on details concerning installation of the decoder at the TVRO. C/FSB will take the two decoders to Independent Hill for some initial tests, after which he will turn one over to HED for installation at Langley.
